(01:15) – slide 1, after "So which one of these sample sizes is going to yield a lower p-value?"

1. All else held equal, will the p-value be lower if $n = 100$ or $n = 10,000$?

(a) $n = 100$

(b) $n = 10,000$

Answers:

1. b
